

# Windows Task Scheduler Scripts

Read the web version at [PCTips.com](http://PCTips.com)

## Virus Scan Script:

```
@echo off
openfiles >nul 2>&1
if %errorlevel% NEQ 0 (
    echo This script requires administrative privileges.
    echo Please run as administrator.
    PowerShell -Command "Start-Process '%~f0' -Verb RunAs"
    exit /b
)
"%ProgramFiles%\Windows Defender\MpCmdRun.exe" -Scan -ScanType 1
:: If you wish to run full scan, opt for this (delete the previous line and remove '::' from the line
below
:: "%ProgramFiles%\Windows Defender\MpCmdRun.exe" -Scan -ScanType 2
echo Virus scan complete.
Pause
```

## Automatic Defrag:

```
@echo off
openfiles >nul 2>&1
if %errorlevel% NEQ 0 (
    echo This script requires administrative privileges.
    echo Please run as administrator.
    pause
    exit /b
)
defrag C: /O /H /V
:: In case your wish to defrag other drives, keep adding lines further, like this one (replace D:
with E:, F:, or whatever drive letter is used
:: defrag D: /O /H /V
echo Defragmentation complete.
pause
```

**Note:** You need not to defrag your SSD, just your HDD)
